Subject Index of Volume 220

Adhesion
  experimental approach to the analysis of the adhesion properties of SiC coatings deposited on steel substrates, 271
Aluminium
  electromigration evaluation of aluminum alloys in multilevel metallization, 14
  mechanical testing of thin metallic films, 265
  effect of subtractive defects and grain size VLSI interconnect early failure, 24
Aluminium oxide
  lapping and polishing process to achieve high quality alumina surfaces for applications in device fabrication, 222
  removal and transfer of material in laser-assisted physical vapour deposition of ceramics, 116
Amorphization
  on eliminating deposition-induced amorphization of interfaces in refractory metal multilayer systems, 166
Amorphous materials
  optical properties of amorphous carbon thin films prepared by plasma deposition in a graphite hollow cathode, 125
Annealing
  comparative study of crystallization processes in Sb_2Te_3 films using laser and thermal annealing techniques, 111
  processing and characterization of high temperature superconductor films formed by spin-on coating and rapid thermal annealing, 146
Antimony
  comparative study of crystallization processes in Sb_2Te_3 films using laser and thermal annealing techniques, 111
Atomic force microscopy
  friction force microscopy of mixed Langmuir–Blodgett films, 132
Auger electron microscopy
  silicide formation and phase separation from Cu/Nb and Nb/Cu bilayers on silicon, 184
Auger electron spectroscopy
  Auger electron spectroscopy and secondary ion mass spectrometry depth profiling with sample rotation, 197
  Auger electron spectroscopy depth profiling studies on stationary and rotated samples of a new model metal/semiconductor multilayer structure, 191
  characterization of the first stages of the formation of metallic sputtered deposits and electrodeposits by Auger electron spectroscopy, 204

Barium
  characterization of the growth of sol–gel derived Ba–Ti–O thin films by laser Raman spectroscopy, 261
Benzene
  fluorinated polymer films from r.f. plasmas containing benzene and sulfur hexafluorine, 295

Carbon
  optical properties of amorphous carbon thin films prepared by plasma deposition in a graphite hollow cathode, 125
Chalcogens
  chemical vapor deposition of novel electronic materials from carbon disulfide, 122
Chemical vapour deposition
  method to estimate local deposition conditions using film profiles in features, 19
  experimental approach to the analysis of the adhesion properties of SiC coatings deposited on steel substrates, 271
  chemical vapor deposition of novel electronic materials from carbon disulfide, 122
  geometrical factors affecting the CO_2 laser chemical vapour deposition of silicon oxide films in parallel configuration, 100
  plasma-enhanced chemically vapour deposited Si_3N_4 thin films for optical waveguides, 311
  reaction mechanism discrimination using experimental film profiles in features, 66
  using thin film to produce precision, figured X-ray optics, 284
Chemical–mechanical polishing
  integration of chemical–mechanical polishing into CMOS integrated circuit manufacturing, 1
Coatings
  experimental approach to the analysis of the adhesion properties of SiC coatings deposited on steel substrates, 271
Copper
  spectroscopic studies of the chemical properties of thin metal films on poly(ether imide), 217
Corrosion
  investigation of some microstructural features related to corrosion initiation in titanium–aluminium nitride coated steel, 160

Deposition process
  method to estimate local deposition conditions using film profiles in features, 19
  experimental approach to the analysis of the adhesion properties of SiC coatings deposited on steel substrates, 271
  development of artificial neural networks for real time, *in situ* ellipsometry data reduction, 247
  effects of oxygen partial pressure on lead content of PLZT thin films produced by excimer laser deposition, 87
  physics and diagnostics of laser ablation plume propagation for high-T_c superconductor film growth, 138
  removal and transfer of material in laser-assisted physical vapour deposition of ceramics, 116
Deposition simulator
  PETEOS simulation using EVOLVE, a deposition simulator, 45
Depth profiling
  Auger electron spectroscopy and secondary ion mass spectrometry depth profiling with sample rotation, 197
Dielectric properties
  effect of substrate bias on properties of silicon nitride films prepared by activated reactive evaporation, 80
  ellipsometric study of metal–organic chemically vapor deposited III–V semiconductor structures, 241
  integrated circuit microsensor for selectively detecting nitrogen dioxide and diisopropyl methylphosphonate, 30
Dielectrics
  reaction mechanism discrimination using experimental film profiles in features, 66

Elastic properties
elastic–plastic characterization of thin films with spherical indentation, 289
Electrical properties and measurements
chemical vapor deposition of novel electronic materials from carbon disulfide, 122
improved electrical properties of silicon dioxide films for MOS gate dielectrics grown in an inductively coupled r.f. plasma, 50
integrated circuit microsensor for selectively detecting nitrogen dioxide and diisopropyl methylphosphonate, 30
Electrochemistry
characterization of the first stages of the formation of metallic sputtered deposits and electrodeposits by Auger electron spectroscopy, 204
Electromigration
electromigration evaluation of aluminum alloys in multilevel metallization, 14
effect of subtractive defects and grain size on VLSI interconnect early failure, 24
Electron microscopy
analytical electron microscopy of thin films and interfaces, 154
Electronic devices
chemical vapor deposition of novel electronic materials from carbon disulfide, 122
Ellipsometry
development of artificial neural networks for real time, *in situ* ellipsometry data reduction, 247
ellipsometric study of metal–organic chemically vapor deposited III–V semiconductor structures, 241
evaluation of optical properties of decorative coatings by spectroscopic ellipsometry, 234
variable angle spectroscopic ellipsometric characterization of surface damage in chemical–mechanical polished GaAs, 303
Evaporation
effect of substrate bias on properties of silicon nitride films prepared by activated reactive evaporation, 80
in situ fabrication of high T_c Y–Ba–Cu–O thin film by resistive evaporation, 151

Gallium arsenide
chemistry and structure of GaAs surfaces cleaned by sulfur annealing, 212
variable angle spectroscopic ellipsometric characterization of surface damage in chemical–mechanical polished GaAs, 303
Graphite
improved Langmuir probe surface coatings for the Cassini satellite, 315
Growth mechanism
densification of plasma deposited silicon nitride films by hydrogen dilution, 73
geometrical factors affecting the CO_2 laser chemical vapour deposition of silicon oxide films in parallel configuration, 100
nucleation of the decagonal quasicrystalline phase in Al–Cu–Co–Si thin films, 172

Hard carbon
nanoindentation studies of thin film coated systems, 277
Hardness
elastic–plastic characterization of thin films with spherical indentation, 289
improved Langmuir probe surface coatings for the Cassini satellite, 315
Heat treatment
in situ fabrication of high T_c Y–Ba–Cu–O thin film by resistive evaporation, 151
Heterostructures
ellipsometric study of metal–organic chemically vapor deposited III–V semiconductor structures, 241
low temperature plasma-assisted oxidation and thin-film deposition processes for forming device-quality SiO_2/Si and composite dielectric-SiO_2/Si heterostructures, 38
Hydrogen
densification of plasma deposited silicon nitride films by hydrogen dilution, 73

Indium oxide
electrical, optical and chemical properties of indium–tin oxidized films grown by sequential electron beam deposition of indium and tin, 321
influence of manufacturing process of indium tin oxide sputtering targets, 333
Interface sharpness
interface sharpness in low-order III–V superlattices, 176
Interfaces
analytical electron microscopy of thin films and interfaces, 154
investigation of some microstructural features related to corrosion initiation in titanium–aluminium nitride coated steel, 160
on eliminating deposition-induced amorphization of interfaces in refractory metal multilayer systems, 166
Ion bombardment
Auger electron spectroscopy and secondary ion mass spectrometry depth profiling with sample rotation, 197
Isolation module
characterization of TEOS oxides used in the isolation module of high-speed bipolar and BiCMOS circuits, 59

Langmuir–Blodgett films
friction force microscopy of mixed Langmuir–Blodgett films, 132
Laser ablation
effects of oxygen partial pressure on lead content of PLZT thin films produced by excimer laser deposition, 87
physics and diagnostics of laser ablation plume propagation for high-T_c superconductor film growth, 138
Laser deposition
characterization of pulsed laser deposited zinc oxide, 92
Laser irradiation
geometrical factors affecting the CO_2 laser chemical vapour deposition of silicon oxide films in parallel configuration, 100
Lead
effects of oxygen partial pressure on lead content of PLZT thin films produced by excimer laser deposition, 87
Light scattering
precision metrology for studying thin films and surfaces, 227

Magnetic structures
lapping and polishing process to achieve high quality alumina surfaces for applications in device fabrication, 222
Metal-oxide conductor structures
integrated circuit microsensor for selectively detecting nitrogen dioxide and diisopropyl methylphosphonate, 30
Metallization
electromigration evaluation of aluminum alloys in multilevel metallization, 14
mechanical testing of thin metallic films, 265

reaction mechanism discrimination using experimental films profiles in features, 66
effect of subtractive defects and grain size VLSI interconnect early failure, 24
Metals
elastic–plastic characterization of thin films with spherical indentation, 289
stress and current induced voiding in passivated metal lines, 8
effect of subtractive defects and grain size on VLSI interconnect early failure, 24
Micromachining
properties of polysilicon films annealed by a rapid thermal annealing process, 106
Multilayer structures
Auger electron spectroscopy depth profiling studies on stationary and rotated samples of a new model metal/semiconductor multilayer structure, 191
Multilayers
electromigration evaluation of aluminum alloys in multilevel metallization, 14
on eliminating deposition-induced amorphization of interfaces in refractory metal multilayer systems, 166

Nanostructures
friction force microscopy of mixed Langmuir–Blodgett films, 132
Nichrome
spectroscopic studies of the chemical properties of thin metal films on poly(ether imide), 217
Nucleation
characterization of the first stages of the formation of metallic sputtered deposits and electrodeposits by Auger electron spectroscopy, 204
nucleation of the decagonal quasicrystalline phase in Al–Cu–Co–Si thin films, 172

Optical coatings
highly conductive and transparent ZnO:Al thin films prepared on high-temperature substrates by d.c. magnetron sputtering, 327
precision metrology for studying thin films and surfaces, 227
using thin film to produce precision, figured X-ray optics, 284
Optical properties
development of artificial neural networks for real time, *in situ* ellipsometry data reduction, 247
effect of substrate bias on properties of silicon nitride films prepared by activated reactive evaporation, 80
evaluation of optical properties of decorative coatings by spectroscopic ellipsometry, 234
optical properties of amorphous carbon thin films prepared by plasma deposition in a graphite hollow cathode, 125
variable angle spectroscopic ellipsometric characterization of surface damage in chemical–mechanical polished GaAs, 303
Optical spectroscopy
evaluation of optical properties of decorative coatings by spectroscopic ellipsometry, 234
physics and diagnostics of laser ablation plume propagation for high-T_c superconductor film growth, 138
Optical waveguides
plasma-enhanced chemically vapour deposited Si_3N_4 thin films for optical waveguides, 311
Organometallic vapour deposition
ellipsometric study of metal–organic chemically vapor deposited III–V semiconductor structures, 241
Oxidation
electrical, optical and chemical properties of indium–tin oxidized films grown by sequential electron beam deposition of indium and tin, 321
low temperature plasma-assisted oxidation and thin-film deposition processes for forming device-quality SiO_2/Si and composite dielectric-SiO_2/Si heterostructures, 38
Oxide
characterization of the growth of sol–gel derived Ba–Ti–O thin films by laser Raman spectroscopy, 261
Oxides
characterization of TEOS oxides used in the isolation module of high-speed bipolar and BiCMOS circuits, 59
Oxygen
effects of oxygen partial pressure on lead content of PLZT thin films produced by excimer laser deposition, 87
in situ fabrication of high T_c Y–Ba–Cu–O thin film by resistive evaporation, 151

Phase transitions
spectroscopic measurements of stress relaxation during thermally induced crystallization of amorphous titania films, 254
Photoelectron spectroscopy
chemistry and structure of GaAs surfaces cleaned by sulfur annealing, 212
Physical vapour deposition
investigation of some microstructural features related to corrosion initiation in titanium–aluminium nitride coated steel, 160
Planarization
lapping and polishing process to achieve high quality alumina surfaces for applications in device fabrication, 222
integration of chemical–mechanical polishing into CMOS circuit manufacturing, 1
Plasma processing and deposition
densification of plasma deposited silicon nitride films by hydrogen dilution, 73
physics and diagnostics of laser ablation plume propagation for high-T_c superconductor film growth, 138
Plastic properties
nanoindentation studies of thin film coated systems, 277
Polymers
elastic–plastic characterization of thin films with spherical indentation, 289
fluorinated polymer films from r.f. plasmas containing benzene and sulfur hexafluorine, 295
Polysilicon
properties of polysilicon films annealed by a rapid thermal annealing process, 106

Raman scattering
spectroscopic measurements of stress relaxation during thermally induced crystallization of amorphous titania films, 254
Rapid thermal annealing
properties of polysilicon films annealed by a rapid thermal annealing process, 106
Resistivity
electrical, optical and chemical properties of indium–tin oxidized films grown by sequential electron beam deposition of indium and tin, 321
influence of manufacturing process of indium tin oxide sputtering targets on sputtering behavior, 333

Rutherford backscattering spectroscopy
silicide formation and phase separation from Cu/Nb and Nb/Cu bilayers on silicon, 184

Secondary ion mass spectrometry
Auger electron spectroscopy and secondary ion mass spectrometry depth profiling with sample rotation, 197
integrated circuit microsensor for selectively detecting nitrogen dioxide and diisopropyl methylphosphonate, 30
Silicides
silicide formation and phase separation from Cu/Nb and Nb/Cu bilayers on silicon, 184
Silicon
low temperature plasma-assisted oxidation and thin-film deposition processes for forming device-quality SiO_2/Si and composite dielectric-SiO_2/Si heterostructures, 38
Silicon dioxide
PETEOS simulation using EVOLVE, a deposition simulator, 45
Silicon nitride
densification of plasma deposited silicon nitride films by hydrogen dilution, 73
effect of substrate bias on properties of silicon nitride films prepared by activated reactive evaporation, 80
plasma-enhanced chemically vapour deposited Si_3N_4 thin films for optical waveguides, 311
Silicon oxide
geometrical factors affecting the CO_2 laser chemical vapour deposition of silicon oxide films in parallel configuration, 100
improved electrical properties of silicon dioxide films for MOS gate dielectrics grown in an inductively coupled r.f. plasma, 50
SiO_2 deposition as a byproduct of SF_6 plasma in an electron cyclotron resonance reactor, 55
Solar cells
highly conductive and transparent ZnO:Al thin films prepared on high-temperature substrates by d.c. magnetron sputtering, 327
Sputtering
characterization of the first stages of the formation of metallic sputtered deposits and electrodeposits by Auger electron spectroscopy, 204
highly conductive and transparent ZnO:Al thin films prepared on high-temperature substrates by d.c. magnetron sputtering, 327
influence of manufacturing process of indium tin oxide sputtering targets on sputtering behavior, 333
on eliminating deposition-induced amorphization of interfaces in refractory metal multilayer systems, 166
Stress
spectroscopic measurements of stress relaxation during thermally induced crystallization of amorphous titania films, 254
stress and current induced voiding in passivated metal lines, 8
Sulphur
chemistry and structure of GaAs surfaces cleaned by sulfur annealing, 212
Sulphur hexafluoride
fluorinated polymer films from r.f. plasmas containing benzene and sulfur hexafluorine, 295
SiO_2 deposition as a byproduct of SF_6 plasma in an electron cyclotron resonance reactor, 55
Superconductivity
in situ fabrication of high T_c Y–Ba–Cu–O thin film by resistive evaporation, 151
processing and characterization of high temperature superconductor films formed by spin-on coating and rapid thermal annealing, 146
Superlattices
interface sharpness in low-order III–V superlattices, 176
Surface characterization
precision metrology for studying thin films and surfaces, 227
Surface morphology
development of artificial neural networks for real time, *in situ* ellipsometry data reduction, 247
variable angle spectroscopic ellipsometric characterization of surface damage in chemical–mechanical polished GaAs, 303
Surface roughness
lapping and polishing process to achieve high quality alumina surfaces for applications in device fabrication, 222
investigation of some microstructural features related to corrosion initiation in titanium–aluminium nitride coated steel, 160
precision metrology for studying thin films and surfaces, 227
Surface stress
using thin film to produce precision, figured X-ray optics, 284
Surface structure
chemistry and structure of GaAs surfaces cleaned by sulfur annealing, 212

Tellurium
comparative study of crystaallization processes in Sb_2Te_3 films using laser and thermal annealing techniques, 111
Tin oxide
electrical, optical and chemical properties of indium–tin oxidized films grown by sequential electron beam deposition of indium and tin, 321
influence of manufacturing process of indium tin oxide sputtering targets on sputtering behavior, 333
Titanium
characterization of the growth of sol–gel derived Ba–Ti–O thin films by laser Raman spectroscopy, 261
Titanium nitride
evaluation of optical properties of decorative coatings by spectroscopic ellipsometry, 234
improved Langmuir probe surface coatings for the Cassini satellite, 315
Titanium oxide
spectroscopic measurements of stress relaxation during thermally induced crystallization of amorphous titania films, 254
Transmission electron microscopy
nucleation of the decagonal quasicrystalline phase in Al–Cu–Co–Si thin films, 172
Tribology
friction force microscopy of mixed Langmuir–Blodgett films, 132
Tungsten
method to estimate local deposition conditions using film profiles in features, 19
reaction mechanism discrimination using experimental film profiles in features, 66

Voiding
stress and current induced voiding in passivated metal lines, 8

Whiskers
nucleation of the decagonal quasicrystalline phase in Al–Cu–Co–Si thin films, 172
Work function
improved Langmuir probe surface coatings for the Cassini satellite, 315

X-ray diffraction
silicide formation and phase separation from Cu/Nb and Nb/Cu bilayers on silicon, 184
using thin film to produce precision, figured X-ray optics, 284
X-ray photoelectron spectroscopy
spectroscopic studies of the chemical properties of thin metal films on poly(ether imide), 217

Zinc oxide
characterization of pulsed laser deposited zinc oxide, 92
highly conductive and transparent ZnO:Al thin films prepared on high-temperature substrates by d.c. magnetron sputtering, 327
Zirconium oxide
removal and transfer of material in laser-assisted physical vapour deposition of ceramics, 116
